Avalanche Hazard Forecast

FOR PERIOD 18:00HRS Mon 18/03/2024 TO 18:00HRS Tue 19/03/2024

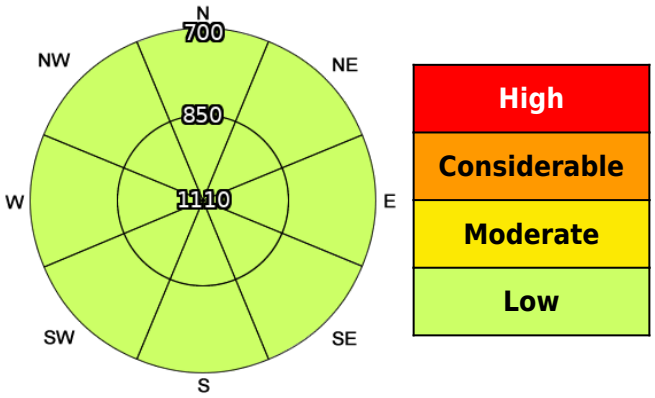
THE AVALANCHE HAZARD WILL BE LOW

Avalanche Hazard Forecast for Tuesday 19/03/2024

Avalanche Problems

Forecast Snow Stability & Avalanche Hazard

There will be a dusting of new snow building during the day above 650 metres and mostly lying on bare ground. Deeper drifts are likely on sheltered high Easterly aspects although amounts will not be significant. Elsewhere, the limited older snowpack will be stable throughout, re-freezing at summit levels through the day. The avalanche hazard will be Low.



Forecast Weather Influences

Overnight rain will turn wintry on the summits by dawn as the freezing level lowers to around 800 metres by midday with snow above 650 metres. Southerly gales overnight will gradually moderate through the day, veering Westerly.

Comments

Most likely dry on Wednesday, with light winds and an increasing chance of sunshine. Otherwise, unsettled with fluctuating freezing levels.
