Avalanche Hazard Forecast

Issued 21/03/2024

FOR PERIOD 18:00HRS Thu 21/03/2024 TO 18:00HRS Fri 22/03/2024

THE AVALANCHE HAZARD WILL BE LOW

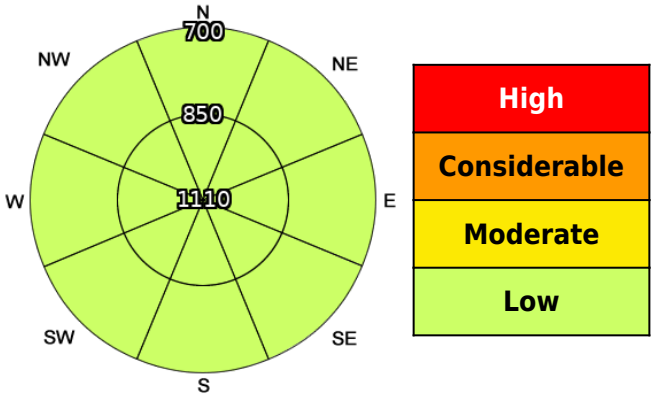
Avalanche Hazard Forecast for Friday 22/03/2024

Avalanche Problems

Wind Slab

Forecast Snow Stability & Avalanche Hazard

A thin layer of largely insignificant fresh snow is expected to develop through the day above around 400 metres. Isolated deposits of windslab will develop on North-East and East aspects above 700 metres, mostly around coire rims and gully tops. These deposits are expected to be shallow and easily avoidable and in many locations overlie bare ground. Elsewhere the limited remaining old snow patches will be firm, icy and stable. The avalanche hazard will be Low.



Forecast Weather Influences

Showers throughout the day will fall as snow above around 400 metres with gale force West-South-Westerly winds. The freezing level will fall gradually through the night to be around 500 metres by dawn.

Comments

Remaining windy with snow showers on Saturday.
