Torridon

Avalanche Hazard Forecast

Issued 24/03/2024

FOR PERIOD 18:00HRS Sun 24/03/2024 TO 18:00HRS Mon 25/03/2024

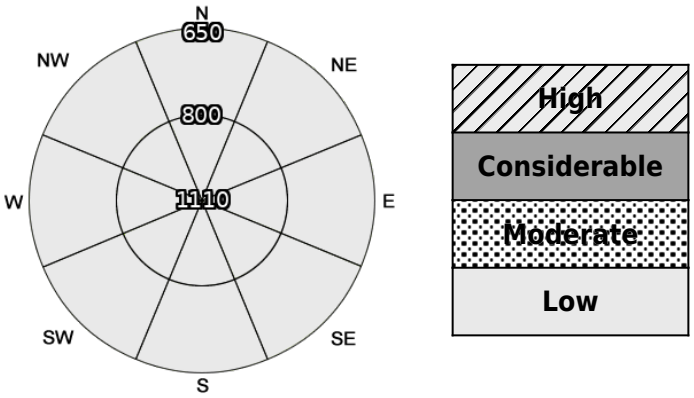
THE AVALANCHE HAZARD WILL BE LOW

Avalanche Hazard Forecast for Monday 25/03/2024

Avalanche Problems

Forecast Snow Stability & Avalanche Hazard

The mainly shallow snow cover, which mostly lies above 700 metres, will continue to consolidate throughout the forecast period.and snowpack stability will generally be good. Deeper areas of windslab will remain on East to South aspects, largely above 800m. but these areas are not extensive and are specifically confined to coire rims, ridge flanks and tops of gullies. The avalanche hazard will be Low.



Forecast Weather Influences

It will be a largely dry day, but with the possibility of a few snow flurries on the coastal mountains at the end of the forecast period. The wind will be a persistent fresh Easterly and the freezing level will dip to 500 metres overnight, peaking at 750 metres in the afternoon.

Comments

It is possible that the Torridon forecast area will avoid the worst of the changeable weather expected over the next few days, allowing the existing snowpack to continue to slowly consolidate.
