

THE AVALANCHE HAZARD WILL BE MODERATE

Avalanche Hazard Forecast for Monday 28/02/2022

Avalanche Problems

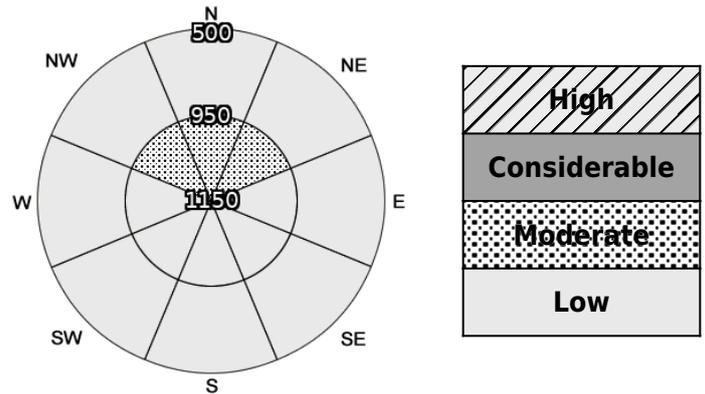

Wind Slab

Cornices

Forecast Snow Stability & Avalanche Hazard

Stability will generally remain good with much of the existing snowpack firm and icy in exposed areas. Light showers of new snow will form localised areas of moderately bonded windslab in wind sheltered locations, greatest accumulations will be in summit gully exits and steep corrie rims with a North-West through North to North-Easterly aspect mainly above 950 metres. These accumulations are not expected to be deep or extensive. The avalanche hazard will be Moderate.

Forecast Weather Influences

Very windy conditions from the South overnight will ease and veer becoming generally fresh to strong South-Westerly. Overnight the freezing level will briefly rise above the summits lowering through the day to 700 metres. A brief period of light to moderate snow overnight will be followed by light snow showers through the day.

Comments

Fresh cornices will be fragile.
