Southern Cairngorms

Avalanche Hazard Forecast

Issued 25/03/2024

FOR PERIOD 18:00HRS Mon 25/03/2024 TO 18:00HRS Tue 26/03/2024

THE AVALANCHE HAZARD WILL BE LOW

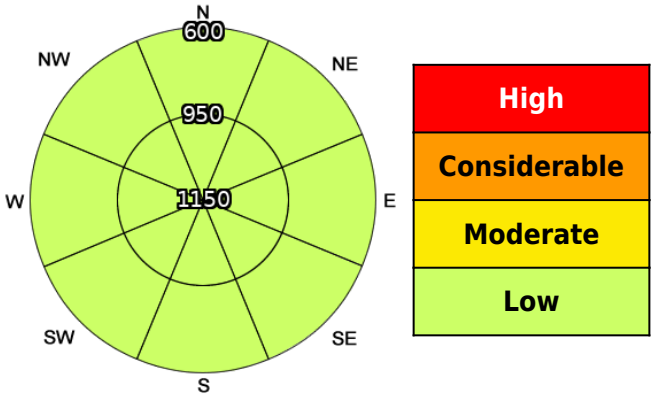
Avalanche Hazard Forecast for Tuesday 26/03/2024

Avalanche Problems

Wind Slab

Forecast Snow Stability & Avalanche Hazard

New accumulations will start to build on South to West aspects above 900 metres. These will mostly develop on bare ground and are not expected to be of any significant depth; however isolated pockets of unstable snow may develop particularly where new snow overlies the old firm snow. This will be restricted to around corrie rims and other wind sheltered areas. The avalanche hazard will be Low.



Forecast Weather Influences

Remaining cold with the freezing level around 500 metres by dawn, lifting to 600 metres during the day. There will be light snowfall overnight at all levels but becoming dry during the day. A brief period of East-North-Easterlies overnight otherwise mainly North-Easterlies. Strong throughout this period.

Comments

There is a possibility that there will be more snowfall than described above. Check latest weather forecast for up to date amounts. Existing snow cover is greater in the main Cairngorms than Glenshee-Lochnagar hills.
