Avalanche Hazard Forecast

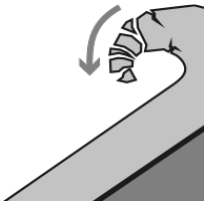
FOR PERIOD 18:00HRS Tue 26/03/2024 TO 18:00HRS Wed 27/03/2024

THE AVALANCHE HAZARD WILL BE MODERATE

Avalanche Hazard Forecast for Wednesday 27/03/2024

Avalanche Problems

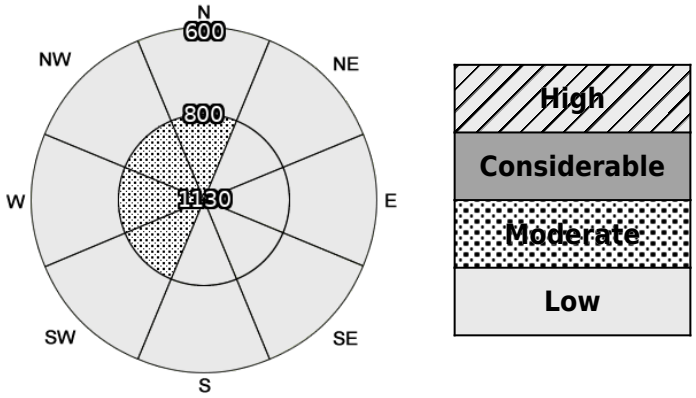
Wind Slab



Cornices

Forecast Snow Stability & Avalanche Hazard

Localised accumulations of unstable windslab will develop in steep wind sheltered locations, mainly on South-West through West to North aspects above 800 metres. Fragile cornices will build above the same aspects. Generally good stability elsewhere. The avalanche hazard will be Moderate.



Forecast Weather Influences

Overnight the freezing level will drop to around 400 metres, then rise steadily to 950 metres by the end of the forecasting period. Snow fall initially to around 300 metres, becoming lighter through the day with snow gradually becoming confined to above 800 metres. Generally strong Easterly winds.

Comments

There is uncertainty over the forecast snow quantities. If the snowfall is greater than forecast, the avalanche hazard will become more widespread.
