Avalanche Hazard Forecast

Issued 26/03/2024

FOR PERIOD 18:00HRS Tue 26/03/2024 TO 18:00HRS Wed 27/03/2024

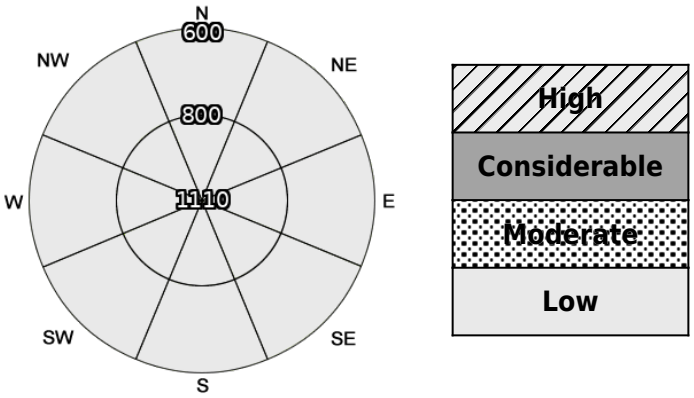
THE AVALANCHE HAZARD WILL BE LOW

Avalanche Hazard Forecast for Wednesday 27/03/2024

Avalanche Problems

Forecast Snow Stability & Avalanche Hazard

The existing shallow snowpack will continue to consolidate and be well bonded and stable throughout. The snow surface is expected to be firm and icy in many locations. A thin covering of fresh snow will develop with slightly deeper deposits on Westerly aspects. These are not expected to be significant and will overlie bare ground. The avalanche hazard will be Low.



Forecast Weather Influences

Light showers through the day will initially fall as snow above around 300 metres turning to rain below 800 metres as the freezing level rises to a similar level by the end of the day. Gale Force Easterly winds will gradually ease.

Comments

Reasonable snow cover above 800 metres. The snow surface will be firm and icy in many locations with steeper slopes having serious run outs onto rocks below. .
