Avalanche Hazard Forecast

FOR PERIOD 18:00HRS Mon 28/02/2022 TO 18:00HRS Tue 01/03/2022

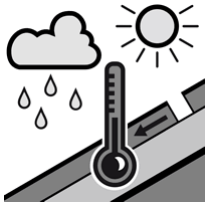

THE AVALANCHE HAZARD WILL BE LOW

Avalanche Hazard Forecast for Tuesday 01/03/2022

Avalanche Problems

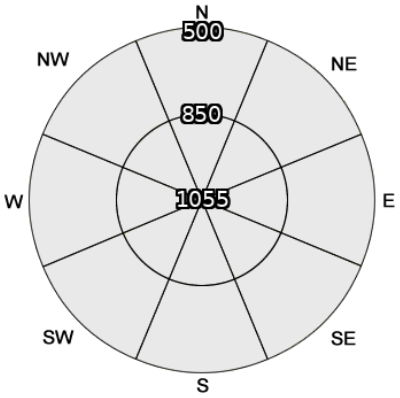

Wind Slab

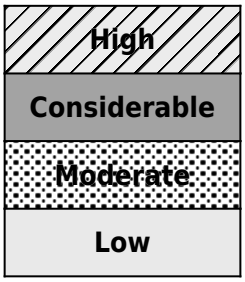

Wet Snow

Forecast Snow Stability & Avalanche Hazard

The snowpack will continue to thaw at lower levels. Above 600 metres there will be a slight firming of the existing snowpack as the freezing level lowers. There will be the chance of some shallow windslab deposits forming on wind sheltered terrain above 850 metres on North-East to South-East aspects. These isolated deposits will be shallow and avoidable. The avalanche hazard will be Low.

Forecast Weather Influences

The strong West-South-West wind will continue overnight reducing in strength to become fresh South-West by the morning. There will be some light snow showers this evening then dry for the remainder of the period. The freezing level will be around 600 metres rising gradually to around 850 metres tomorrow.

Comments

Winds easing later on Tuesday, bringing mainly dryer conditions through Wednesday.
