Avalanche Hazard Forecast

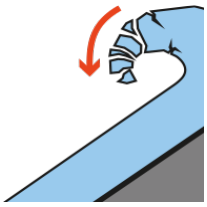
Issued 28/03/2024

FOR PERIOD 18:00HRS Thu 28/03/2024 TO 18:00HRS Fri 29/03/2024

THE AVALANCHE HAZARD WILL BE LOW

Avalanche Hazard Forecast for Friday 29/03/2024

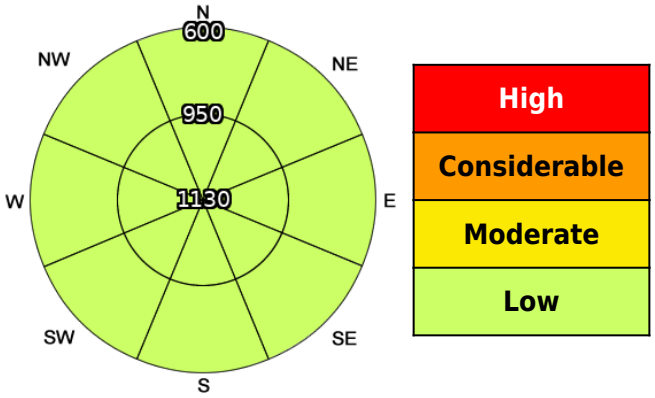
Avalanche Problems



Cornices

Forecast Snow Stability & Avalanche Hazard

Consolidating trend will continue in most recent windslab deposits on South-West through West to North aspects above 950m; only isolated residual instability will remain. Recently formed cornices over these locations will weaken later as the freezing level rises close to summits. Good stability expected on all other aspects and altitudes. The avalanche hazard will be Low.



Forecast Weather Influences

East-South-East winds easing overnight to light Southerly, increasing to fresh South-Westerly later. Generally dry until later in the afternoon when there will be some light snow showers. Freezing level falling from just below summits overnight down to 800m then slowly up to 1000m later.

Comments

Consolidating trend. Weaker cornices later in the day.
