Avalanche Hazard Forecast

Issued 29/03/2024

FOR PERIOD 18:00HRS Fri 29/03/2024 TO 18:00HRS Sat 30/03/2024

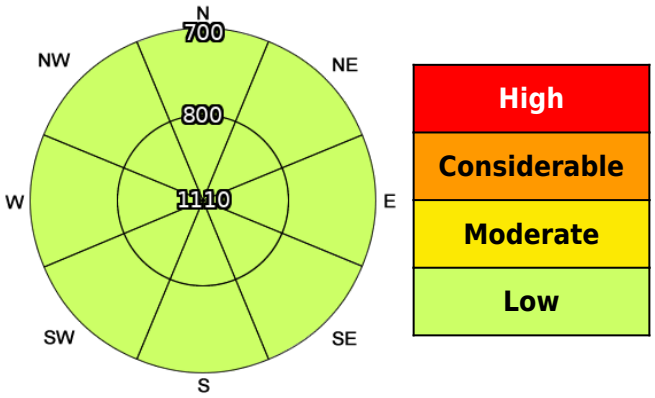
THE AVALANCHE HAZARD WILL BE LOW

Avalanche Hazard Forecast for Saturday 30/03/2024

Avalanche Problems

Forecast Snow Stability & Avalanche Hazard

The limited and generally shallow snow cover will be well consolidated and stable. A light dusting of new snow on the highest summits is possible in the afternoon. The snow at higher elevations will remain firm, icy in places, with serious run-outs. Most snow will be on mountains away from the coast, mainly on East to South aspects above 800 metres. The avalanche hazard will be Low.



Forecast Weather Influences

A mainly dry period with the possibility of some light sleet and snow on the highest summits during the afternoon. There will be a moderate to fresh, generally Southerly wind throughout and the freezing level will hover around 1000 metres.

Comments

Little change in the snowpack for tomorrow. Despite the mild conditions, the snow will remain very firm at higher elevations, particularly on shaded aspects.
