

**THE AVALANCHE HAZARD WILL BE LOW**

**Avalanche Hazard Forecast for Thursday 03/03/2022**

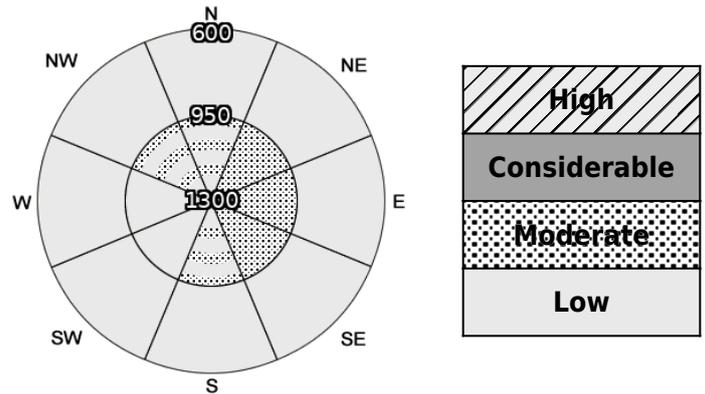

**Avalanche Problems**

Wind Slab

**Forecast Snow Stability & Avalanche Hazard**

The snowpack will remain generally well bonded and stable. Fresh deposits of windslab will form in wind sheltered locations mainly on West through North to North-East aspects above 950 metres. Accumulations will be localised and generally shallow with gully tops and coire rims most affected. At lower elevations the snowpack will begin to soften. The avalanche hazard will be Low.

**Forecast Weather Influences**

Following a dry evening, precipitation overnight and during the day will fall as snow around the higher summits. Strong South-Easterly winds overnight will decrease. The freezing level will mainly be above the summits dropping slightly during the afternoon.

**Comments**

New snow amounts expected to be small.
