Avalanche Hazard Forecast

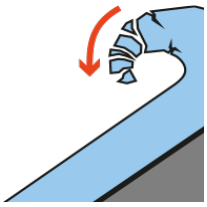
Issued 01/04/2024

FOR PERIOD 18:00HRS Mon 01/04/2024 TO 18:00HRS Tue 02/04/2024

THE AVALANCHE HAZARD WILL BE LOW

Avalanche Hazard Forecast for Tuesday 02/04/2024

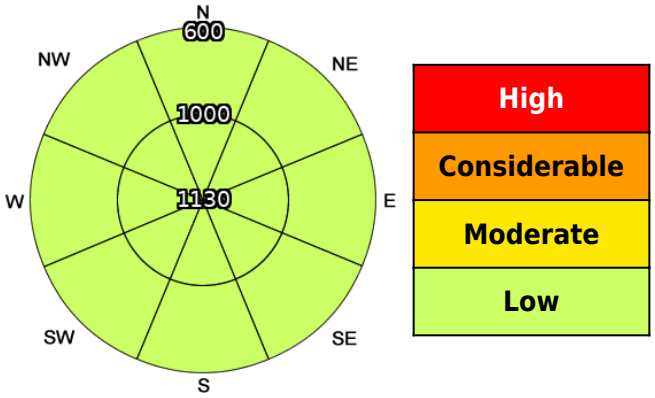
Avalanche Problems



Cornices

Forecast Snow Stability & Avalanche Hazard

The snowpack lying on mostly North to Easterly aspects above 800 metres will continue to consolidate after firming up overnight and will be generally stable throughout the period. Some new snow lying at summit levels on mainly South-West to North-Westerly aspects will provide a thin cover lying mostly on bare ground and generally will not be significant in depth. Large cornices will continue to threaten North to Easterly aspects. The avalanche hazard will be Low



Forecast Weather Influences

The freezing level will remain around 1000 metres during the day but will be around -1.5 deg C overnight on the tops. Snow and sleet showers overnight and through the day lying mostly above 900 metres. Winds will be strong generally North-Easterly.

Comments

Some new snow at summit levels but amounts not expected to be great, will present snowy tops.
