Avalanche Hazard Forecast

Issued 04/04/2024

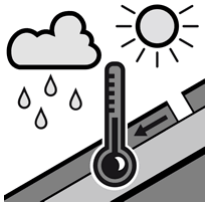
FOR PERIOD 18:00HRS Thu 04/04/2024 TO 18:00HRS Fri 05/04/2024

THE AVALANCHE HAZARD WILL BE MODERATE

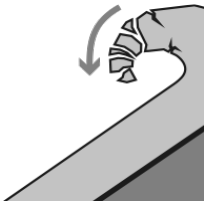
Avalanche Hazard Forecast for Friday 05/04/2024

Avalanche Problems

Wind Slab



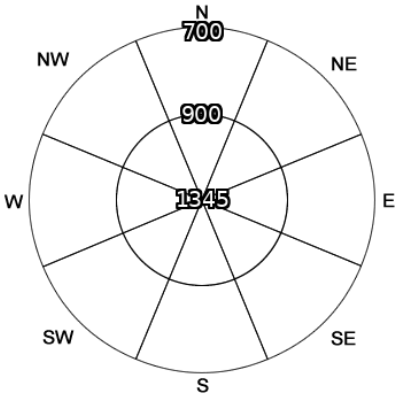
Wet Snow

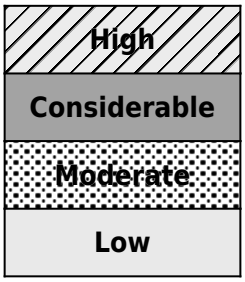


Cornices

Forecast Snow Stability & Avalanche Hazard

Fresh areas of windslab will be deposited in wind-sheltered locations on mainly, but not exclusively, South-West through West to North aspects above 900 metres. These deposits are not expected to be particularly extensive, and will generally be avoidable. However, they will become unstable as they become wet. Remaining cornices on all aspects will be prone to collapse. The avalanche hazard will be Moderate.





Forecast Weather Influences

Overnight snow above 500 metres will progressively turn to showery rain at all levels as the freezing level rises above the summits by early afternoon. Strong winds will be from the East-South-East.

Comments

Continuing wet and mild over the next few days.
