Avalanche Hazard Forecast

Issued 06/04/2024

FOR PERIOD 18:00HRS Sat 06/04/2024 TO 18:00HRS Sun 07/04/2024

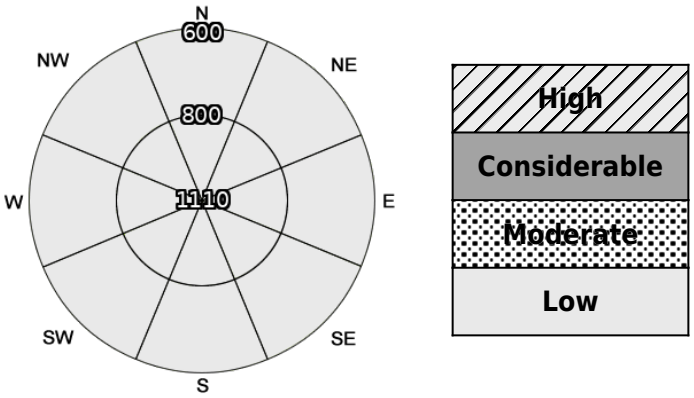
THE AVALANCHE HAZARD WILL BE LOW

Avalanche Hazard Forecast for Sunday 07/04/2024

Avalanche Problems

Forecast Snow Stability & Avalanche Hazard

The remaining very patchy snow cover will be well bonded and stable throughout. The snow surface will become firmer on the highest summits with a continued thaw at most elevations. Any new summit snow deposits are not expected to be significant. The avalanche hazard will be Low



Forecast Weather Influences

Showers throughout the period will be rain at most levels with snow only on the highest summits. Storm force South-South-Westerly winds. The freezing level will be around 1000 metres.

Comments

Only limited patchy snow cover remains. Greatest amounts are around coire rims, in gullies and on a few summit slopes. More snow on the inland hills in the area with many, slopes, ridges and summits on the more coastal hills bare of snow.
