Avalanche Hazard Forecast

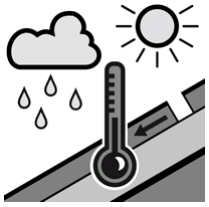
FOR PERIOD 18:00HRS Tue 09/04/2024 TO 18:00HRS Wed 10/04/2024

THE AVALANCHE HAZARD WILL BE MODERATE

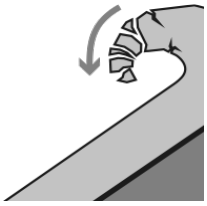
Avalanche Hazard Forecast for Wednesday 10/04/2024

Avalanche Problems

Wind Slab



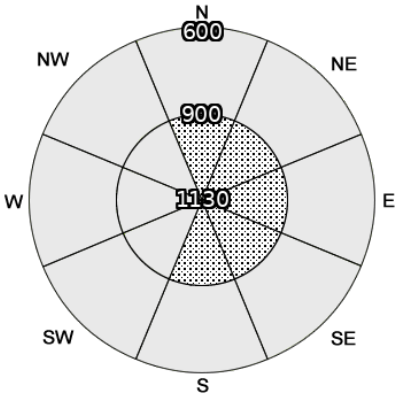
Wet Snow

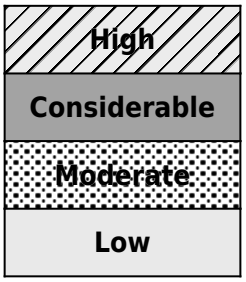


Cornices

Forecast Snow Stability & Avalanche Hazard

Unstable windslab will be present on North through East to South aspects above 900 metres. Areas most affected will be gully tops, coire rims and steep convex slopes. During the day there will be a period of heightened instability as the snowpack becomes saturated. Wet snow instabilities will become more prevalent and cornices will be prone to collapse. The avalanche hazard will be Moderate.





Forecast Weather Influences

Strong West-North-West winds will back Southerly overnight becoming gale force throughout the day as a new frontal system arrives. Freezing level will rise well above the summits during the morning. Summit snow will precede the onset of rain by mid morning.

Comments

Increasing risk from rockfall, and cornice collapse as the day progresses.
