Avalanche Hazard Forecast

FOR PERIOD 18:00HRS Fri 12/04/2024 TO 18:00HRS Sat 13/04/2024

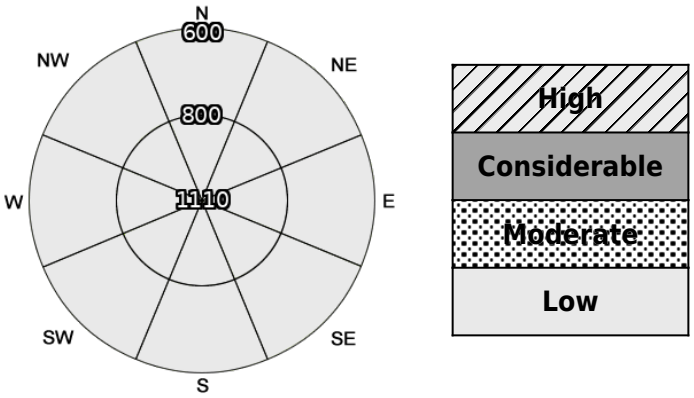
THE AVALANCHE HAZARD WILL BE LOW

Avalanche Hazard Forecast for Saturday 13/04/2024

Avalanche Problems

Forecast Snow Stability & Avalanche Hazard

The existing limited and very patchy snow cover will remain stable in all locations. Largest areas will remain around coire rims on North to East aspects above 800m predominantly on the more inland hills in the area. New snow amounts are not expected to be significant. Any isolated windslab deposits that develop during the afternoon on North to East aspects above 800 metres are expected to be shallow and will mainly overlie bare ground. The avalanche hazard will be Low.



Forecast Weather Influences

Rain at all levels overnight will ease to give scattered showers, these will become heavier in the afternoon and gradually turn to snow above around 750 metres as the freezing level lowers to a similar height. Gale force South-Westerly winds.

Comments

Colder conditions for the next few days.
