

THE AVALANCHE HAZARD WILL BE LOW

Avalanche Hazard Forecast for Sunday 06/03/2022

Avalanche Problems

Forecast Snow Stability & Avalanche Hazard

Little change is expected. The snowpack will remain generally stable. Most of its surface will be frozen and firm, though some softening may occur during the day where exposed to the effects of solar radiation. Glide cracks will continue to widen on selected East aspects below around 800 metres. The avalanche hazard will be Low.

Forecast Weather Influences

It is expected to be dry, with overnight light variable winds strengthening to moderate Southerly during the day. The summit temperature will rise to around -2C during the day.

Comments

Most of the snow surface will be frozen and hard.
