Avalanche Hazard Forecast

FOR PERIOD 18:00HRS Sat 13/04/2024 TO 18:00HRS Sun 14/04/2024

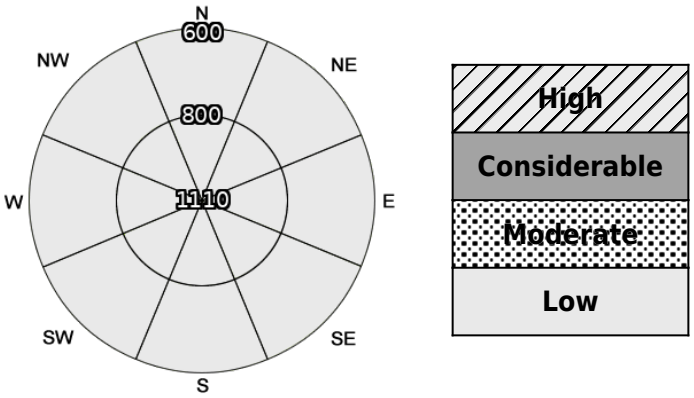
THE AVALANCHE HAZARD WILL BE LOW

Avalanche Hazard Forecast for Sunday 14/04/2024

Avalanche Problems

Forecast Snow Stability & Avalanche Hazard

The very limited, patchy existing snow cover will remain well bonded and stable in all locations. New snow amounts are not expected to be significant. Any isolated windslab deposits that form on mainly North to East aspects above 800 metres, are expected to be shallow and mainly overlie bare ground. The avalanche hazard will be Low.



Forecast Weather Influences

Showers throughout the forecast period will initially fall as snow above 700 metres turning to rain below 900 metres, as the freezing level rises to a similar height by the end of the afternoon. Gale force Westerly winds overnight will become very strong South-Westerly during the day.

Comments

Largest areas of old snow exist around coire rims on North to East aspects above 800m, predominately on the most inland mountains in our forecast area. This is the last forecast for the 23/24 season. Thank you for reading.
