Glencoe

Avalanche Hazard Forecast

Issued 09/02/2010

FOR PERIOD 18:00HRS Tue 09/02/2010 TO 18:00HRS Wed 10/02/2010

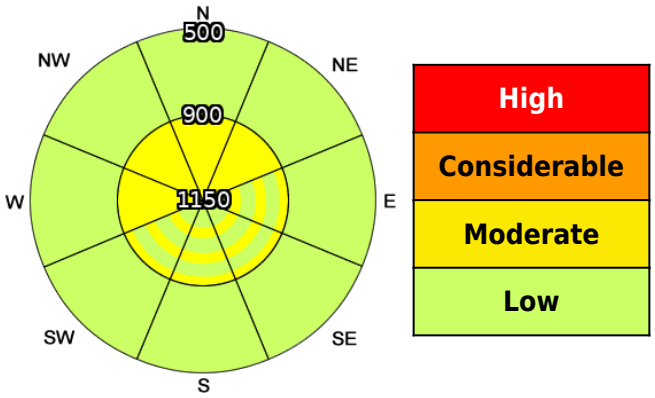
THE AVALANCHE HAZARD WILL BE MODERATE

Avalanche Hazard Forecast for Wednesday 10/02/2010

Avalanche Problems

Forecast Snow Stability & Avalanche Hazard

Mainly dry settled and cool conditions will continue to consolidate much of the snowpack. Areas of moderately bonded windslab will remain mainly above 900 metres in the most sheltered of gullies and also on steep West through North to North-Easterly aspects. Steep scarp slopes,corniced areas and gully exits will be most affected. The avalanche hazard will be Moderate.



Forecast Weather Influences

It will remain cool and mainly dry with only a few snow flurries possible. Winds will be fresh from a North-Easterly direction.

Comments

Climbing conditions are improving on many of the higher buttresses. Excellent skiing on great snow at Glencoe Ski Centre. Fragile cornices exist around the tops of many higher slopes, great caution required in poor visibility.
