Glencoe

Avalanche Hazard Forecast

Issued 13/12/2019

FOR PERIOD 18:00HRS Fri 13/12/2019 TO 18:00HRS Sat 14/12/2019

THE AVALANCHE HAZARD WILL BE MODERATE

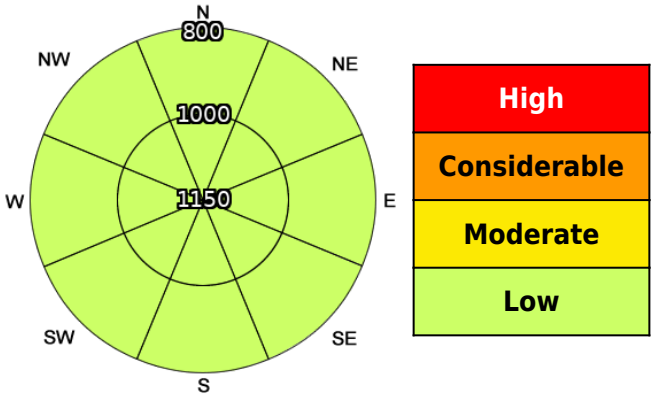
Avalanche Hazard Forecast for Saturday 14/12/2019

Avalanche Problems

Wind Slab

Forecast Snow Stability & Avalanche Hazard

Further localised accumulations of unstable windslab will develop on North-West through North to East aspects mainly above 880 metres. Greatest accumulations will be in steep sheltered locations, with corrie rims, gully exits and steep convexities being particularly affected. The avalanche hazard will be Moderate.



Forecast Weather Influences

It will remain generally dry overnight then snow showers starting early morning continuing through the day. Winds will be fresh, occasionally strong from the South-West and the freezing level around 750 metres falling through the period to 400 metres.

Comments

The snowpack is shallow at lower elevations some deeper areas exist above 850 metres. Wind speed and direction on Saturday may vary - with periods of SE winds, though in the main these winds likely to be lighter if they develop.
