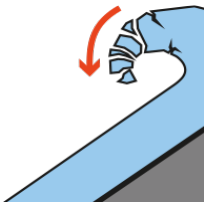
Issued 25/12/2019

FOR PERIOD 18:00HRS Wed 25/12/2019 TO 18:00HRS Thu 26/12/2019

THE AVALANCHE HAZARD WILL BE LOW

Avalanche Hazard Forecast for Thursday 26/12/2019

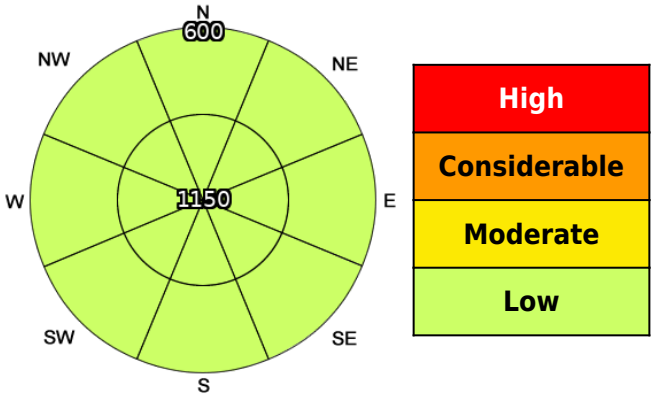
Avalanche Problems



Cornices

Forecast Snow Stability & Avalanche Hazard

The existing snowpack is generally well bonded and stable. Localised instabilities persist mainly on Steep North to East aspects above 1000 metres with gully exits and corrie rims most affected. Cornices above these aspects will be fragile. Fresh windslab will be deposited during the day mainly on West and North-West aspects above 800 metres but accumulations are expected to be localised and shallow. The avalanche hazard will be Low.



Forecast Weather Influences

East-South-East winds increase overnight to become strong during the day. Occasional snow showers during he day. Freezing level around 800 metres.

Comments

Warm and windy conditions expected for Friday and Saturday.
