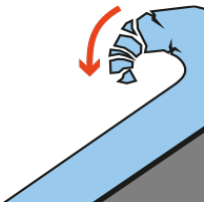
Avalanche Hazard Forecast for Monday 30/12/2019

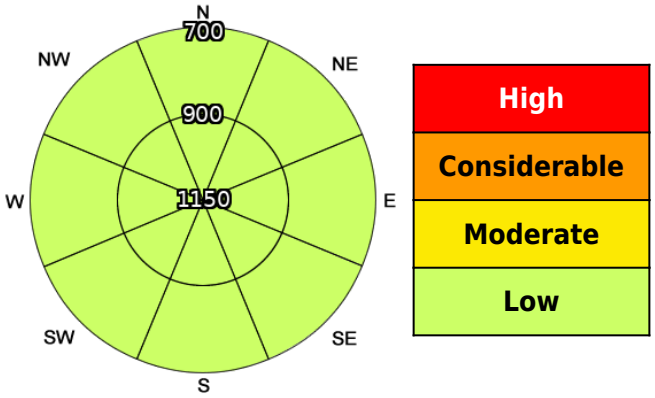
Avalanche Problems



Cornices

Forecast Snow Stability & Avalanche Hazard

New snow amounts are not expected to be significant, a thin dusting, mostly above 900 metres. The moist snowpack will continue to slowly thaw and consolidate, remaining generally stable at all levels. Greatest old snow amounts will be on North to Easterly aspects above 900 metres. The avalanche hazard will be Low.



Forecast Weather Influences

The freezing level will remain above the summits for most of the period but lowering to around 1000 metres by late afternoon. At first, rain falling at all levels then some very light snow fall above 900 metres by late afternoon. Strong South-Westerly winds easing through the day becoming West-South-Westerly.

Comments

Moist snowpack consolidating but cover is limited. Monday night and Tuesday, clear and dry conditions with freezing levels around 900 metres.
