Avalanche Hazard Forecast

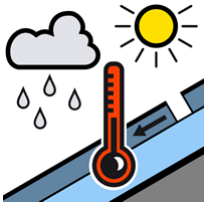
**Issued 09/03/2022**

FOR PERIOD 18:00HRS Wed 09/03/2022 TO 18:00HRS Thu 10/03/2022

## THE AVALANCHE HAZARD WILL BE LOW

### Avalanche Hazard Forecast for Thursday 10/03/2022

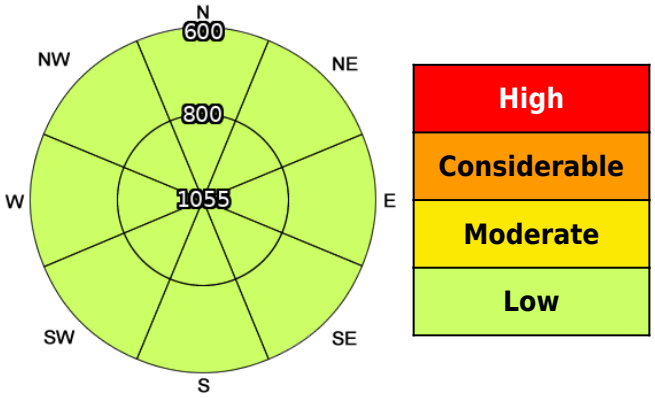
#### Avalanche Problems



**Wet Snow**

#### Forecast Snow Stability & Avalanche Hazard

The older existing snowpack will remain firm and stable at first. There will be some softening in the early hours as the freezing level begins to rise. Later some minor wet snow instabilities will begin to develop affecting steeper terrain on North-West through East to South-East aspects above 800 metres. The snowpack will continue to thaw below this level. The avalanche hazard will be Low.



#### Forecast Weather Influences

Winds will be fresh Southerly this evening, backing Easterly and gaining in strength overnight to become strong South-South-Westerly. It will be dry overnight with some light rain showers tomorrow. The freezing level will be around 800 meters at first then rising to above summit levels, lowering again later tomorrow to around 850 metres.

#### Comments

A weakening front, bringing strong South or South-South East winds to all ranges, some light rain and the freezing level rising to above summit levels.
