Torridon

Avalanche Hazard Forecast

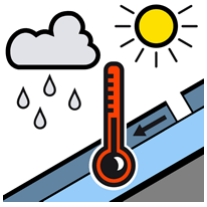
Issued 10/03/2022

FOR PERIOD 18:00HRS Thu 10/03/2022 TO 18:00HRS Fri 11/03/2022

THE AVALANCHE HAZARD WILL BE LOW

Avalanche Hazard Forecast for Friday 11/03/2022

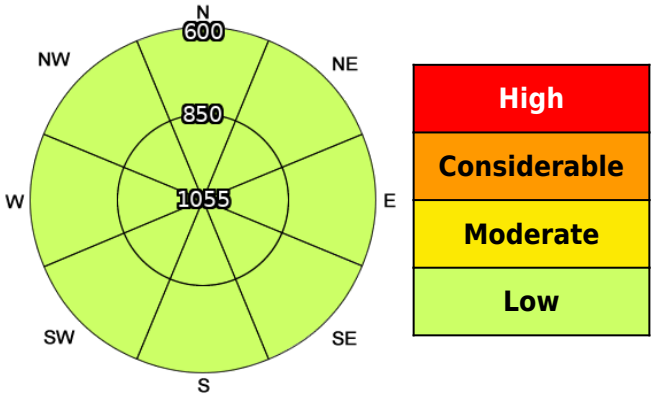
Avalanche Problems



Wet Snow

Forecast Snow Stability & Avalanche Hazard

The snowpack will be firm overnight before softening and continuing to thaw during the day. Some minor wet snow instabilities will linger in steep North through East to South-East aspects above 850 metres. The greatest snow cover is found on these aspects above 700 metres while South-West to North-West aspects are scoured and bare in many locations. The avalanche hazard will be Low.



Forecast Weather Influences

It is expected to be dry throughout the forecast period. Winds will be strong Southerly in the evening, backing to become mainly South-Easterly later. The freezing level will be around 800 metres overnight but rising to lie above the summits during the day.

Comments

Some wet surface instabilities were observed on North-East to South-East aspects above 750 metres.
