FOR PERIOD 18:00HRS Tue 11/02/2020 TO 18:00HRS Wed 12/02/2020

THE AVALANCHE HAZARD WILL BE CONSIDERABLE

Avalanche Hazard Forecast for Wednesday 12/02/2020

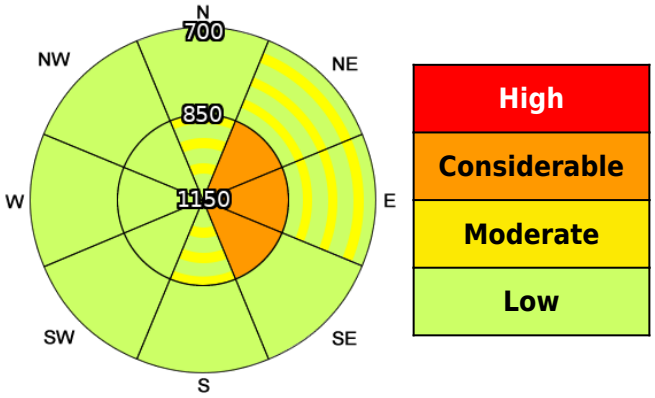
Avalanche Problems

Wind Slab

Cornices

Forecast Snow Stability & Avalanche Hazard

New snow and wind transport of existing deposits will continue to form unstable windslab in wind sheltered areas, greatest accumulations will be present in gullies and on North-East to South-Easterly aspects mainly above 850 metres. Other areas may be affected by cross loading. Fragile cornices will be above many of these aspects. Windward slopes will remain scoured and be generally stable. The avalanche hazard will be Considerable.



Forecast Weather Influences

New snow mainly overnight will become showery through the day. Westerly winds will be strong overnight and at start of the day becoming fresh by end of the day. The freezing level will be around 300 metres.

Comments

Not so wild tomorrow with lighter winds and less snow forecast through the day.
