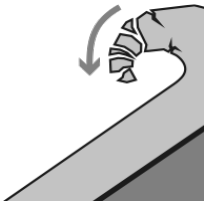
Avalanche Problems

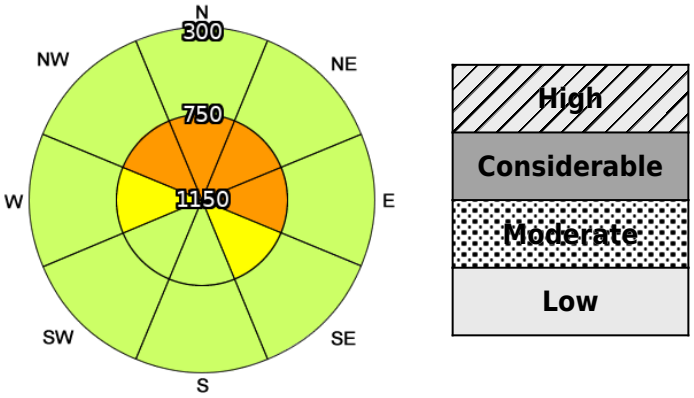
Wind Slab



Cornices

Forecast Snow Stability & Avalanche Hazard

Further, new unstable windslab will be deposited mainly on North-West through North to Easterly aspects above 750 metres where avalanches are likely. Areas particularly affected are coire rims, ridge flanks, gullies and scarp slopes. Other aspects will also be affected due to cross loading. Instabilities will also persist in the older snowpack where deeper accumulations exist particularly above 900 metres on similar aspects. Cornices will be fragile. The avalanche hazard will be Considerable.



Forecast Weather Influences

Remaining cold, the freezing level at around 400 metres with snow showers through the whole period, often heavy at times and falling to lower levels. Winds will be strong West-South-Westerly overnight backing to South-West during the day.

Comments

Dry and relatively settled conditions for Monday evening but unsettled soon after with more snow.
