

## THE AVALANCHE HAZARD WILL BE MODERATE

### Avalanche Hazard Forecast for Sunday 13/03/2022

#### Avalanche Problems

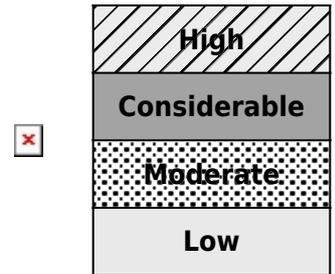

Wind Slab

Cornices

#### Forecast Snow Stability & Avalanche Hazard

New unstable windslab will develop through the day on Westerly to Northerly aspects above 1000 metres. The greatest instability will be where accumulations gain depth in wind sheltered locations. Steep and convex terrain, coire rims, gully exits and crag aprons will be most affected. Cornices will be unstable. Elsewhere the old snowpack will continue to consolidate in the fluctuating temperatures. The avalanche hazard will be Moderate.

#### Forecast Weather Influences

Strong to gale force South-Easterly winds throughout the forecast period. A dry night followed by precipitation falling as snow initially above 900 metres, then just below summit levels through the afternoon. The 1000 metres freezing level will slowly rise to summit levels by the end of the day.

#### Comments

Rock and ice fall will remain a potential hazard.
