

Avalanche Hazard Forecast - FOR PERIOD 18:00HRS Sun 13/03/2022 TO 18:00HRS Mon 14/03/2022

Hazard Level	Avalanche Probability
Very High	Natural and human triggered avalanches will occur. Numerous very large, often extremely large natural avalanches can be expected.
High	Natural and human triggered avalanches will occur. In some cases, numerous large, often very large sized natural avalanches can be expected.
Considerable	Natural and human triggered avalanches possible, in some cases large, in isolated cases very large sized natural avalanches are possible.
Moderate	Very large sized natural avalanches are unlikely. Human triggering possible in indicated steep places.
Low	Only small and medium sized natural avalanches are possible. Human triggering possible in steep, extreme terrain.

Forecast Weather Influences

There will be very light scattered snow showers mainly above 1000 metres. Winds will be fresh South-South-Easterly veering South-Westerly through the course of the day. Overnight freezing level will be at 900 metres rising to 1100 metres by day.

Forecast Snow Stability and Avalanche Hazard

With only trace amounts of new snow expected general snowpack stability will remain good. A slow gradual thaw will affect most areas through the day. Areas of older windslab will remain in sheltered summit gully exits and around corrie rims with a mainly North-West through North to North-Easterly aspect above 1000 metres. Any cornices in these areas will remain suspect. The avalanche hazard will be Low.

Observed Avalanche Hazard - Sun 13/03/2022

Observed Weather Influences

New snow and South-Easterly winds overnight affected slopes mainly above 800 metres. Today has been mostly dry with fresh Southerly winds. The freezing level through the day rose above the summits.

Observed Snow Stability and Avalanche Hazard

In the main the snowpack is stable. Greater than expected amounts of new snow overnight at higher levels formed areas of moderately bonded windslab in wind sheltered locations mainly above 950 meters. Greatest accumulations are in sheltered summit gully exits and on corrie rims with a North-West to North-Easterly aspect. The avalanche hazard is Moderate.

Mountain Conditions

Observed Mountain Travel Conditions

Diminishing snowpack, good above 800 metres with new overnight snow Cloudy on the tops with some bright spells. Winds 20-30 mph.

Comments

Only trace amounts of new snow expected.
