Issued 26/12/2021

Avalanche Hazard Forecast

FOR PERIOD 18:00HRS Sun 26/12/2021 TO 18:00HRS Mon 27/12/2021

THE AVALANCHE HAZARD WILL BE LOW

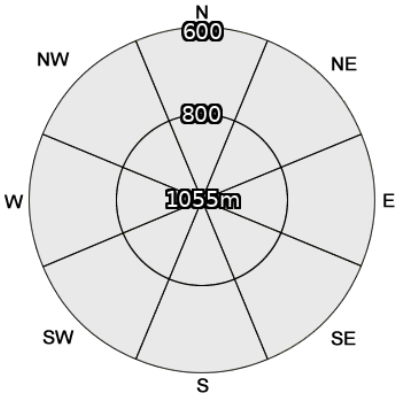
Avalanche Hazard Forecast for Monday 27/12/2021

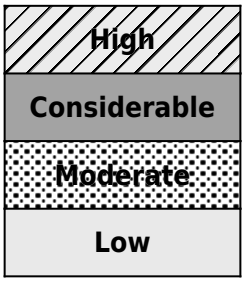
Avalanche Problems

Wind Slab

Forecast Snow Stability & Avalanche Hazard

The crusty thin layer of snow above 600 metres will remain cold and frozen. While there are some remaining isolated weaknesses within the fresher wind blown deeper accumulations above 800 metres on West through North-West to Northerly aspects, these are sparse and generally avoidable. The avalanche hazard will be Low





Forecast Weather Influences

The fresh East-South-East winds will strengthen slightly and back South-South-East overnight becoming fresh Southerly tomorrow. No precipitation is expected. The freezing level will rise a bit tonight to around 1000 metres then gradually lower again in the morning to about 800 metres.

Comments

Continuing cold and dry.
