Torridon

Avalanche Hazard Forecast

Issued 16/01/2022

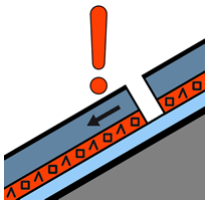
FOR PERIOD 18:00HRS Sun 16/01/2022 TO 18:00HRS Mon 17/01/2022

THE AVALANCHE HAZARD WILL BE LOW

Avalanche Hazard Forecast for Monday 17/01/2022

Avalanche Problems

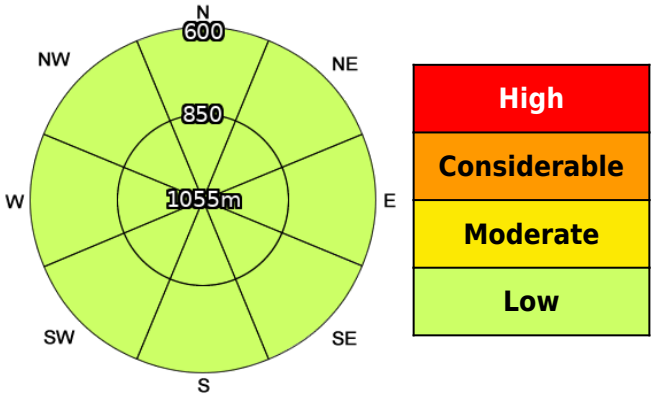
Wind Slab



Persistent Weak Layers

Forecast Snow Stability & Avalanche Hazard

The depleted and patchy snowpack will soften at lower levels and any new snow will thaw. Above 850 metres some minor wind blown deposits will remain mainly on wind sheltered coire rims and ridge flanks, affecting North to East aspects. There will be some minor instability where these wind redistributed deposits lay over the older firm snow. The avalanche hazard will be Low.



Forecast Weather Influences

The high pressure will give dry conditions. The strong West winds will turn West-South-West overnight becoming fresh South-South-West. The freezing level will be around 1100 metres.

Comments

Remaining dry then strengthening South-West winds.
