Avalanche Hazard Forecast

Issued 17/03/2022

FOR PERIOD 18:00HRS Thu 17/03/2022 TO 18:00HRS Fri 18/03/2022

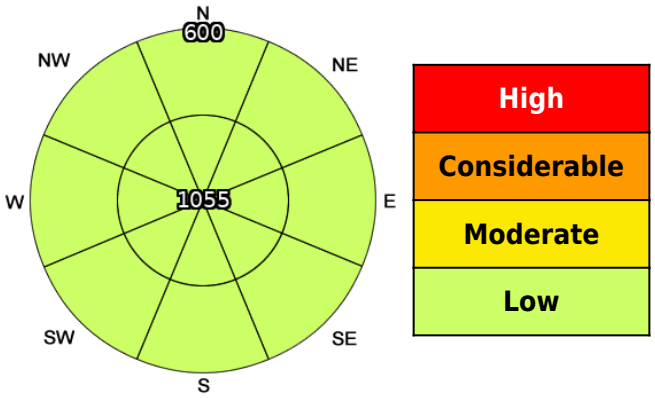

THE AVALANCHE HAZARD WILL BE LOW

Avalanche Hazard Forecast for Friday 18/03/2022

Avalanche Problems

Forecast Snow Stability & Avalanche Hazard

The older snowpack will remain firm overnight, softening as the freezing level rises. It will be well bonded and stable. Minor wet snow surface instabilities will develop within the new snow on steeper terrain from mid morning. The avalanche hazard will be Low.

Forecast Weather Influences

Westerly winds will veer overnight to South-South-Westerly and will remain strong to gale force. Light snow showers will clear by midnight with no further precipitation expected. The freezing level will be around 400 metres, rising steadily through the morning to be above the highest summits by early afternoon.

Comments

High pressure building from the South, winds remaining strong to gale force.
