Avalanche Hazard Forecast

FOR PERIOD 18:00HRS Sat 19/03/2022 TO 18:00HRS Sun 20/03/2022

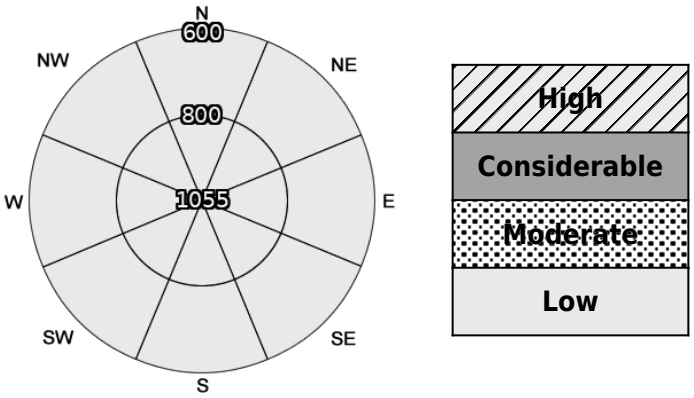

THE AVALANCHE HAZARD WILL BE LOW

Avalanche Hazard Forecast for Sunday 20/03/2022

Avalanche Problems

Forecast Snow Stability & Avalanche Hazard

The snowpack will remain generally well bonded and stable. Above 800 metres any surface softening of the snow will firm up as the freezing level lowers. Below this level some surface softening can be expected on aspects directly exposed to the sun. Best snow cover remains on North-West through East to South aspects above 750 metres. The avalanche hazard will be Low.

Forecast Weather Influences

It will remain dry with sunny or clear periods. The winds will be strong South-East overnight, then lowering in strength by the early hours becoming fresh. At first the freezing level will remain well above the summits lowering to around 800 metres by tomorrow.

Comments

High pressure continuing to dominate, staying dry with sunny or clear periods.
