

THE AVALANCHE HAZARD WILL BE LOW**Avalanche Hazard Forecast for Tuesday 22/03/2022****Avalanche Problems****Cornices****Forecast Snow Stability & Avalanche Hazard**

The snowpack will be generally well bonded and stable, gradually softening to summit level on all aspects. Greatest snow accumulations will be found above 900 metres, particularly on North-West to North-East aspects. The avalanche hazard will be Low.

**Forecast Weather Influences**

Little change with a dry day expected. Milder temperatures will be a feature of the period, with the freezing level above the summits. Winds will be fresh and from the South-East.

Comments

The firm and icy snow surface will gradually soften in the mild temperatures.
