

Avalanche Hazard Forecast - FOR PERIOD 18:00HRS Wed 23/03/2022 TO 18:00HRS Thu 24/03/2022

Hazard Level	Avalanche Probability
Very High	Natural and human triggered avalanches will occur. Numerous very large, often extremely large natural avalanches can be expected.
High	Natural and human triggered avalanches will occur. In some cases, numerous large, often very large sized natural avalanches can be expected.
Considerable	Natural and human triggered avalanches possible, in some cases large, in isolated cases very large sized natural avalanches are possible.
Moderate	Very large sized natural avalanches are unlikely. Human triggering possible in indicated steep places.
Low	Only small and medium sized natural avalanches are possible. Human triggering possible in steep, extreme terrain.

Forecast Weather Influences

The mild weather will continue with the freezing level remaining well above the tops. However, it will be a bit cloudier than of late. Moderate winds will be from the South-West.

Forecast Snow Stability and Avalanche Hazard

Little change is expected. Snow cover will remain good above 1000 metres. This will continue to slowly thaw. Stability will generally be good. Remaining sections of cornice will be prone to collapse. The avalanche hazard will be Low.

Observed Avalanche Hazard - Wed 23/03/2022

Observed Weather Influences

Another warm, dry and sunny day with light Southerly winds. The freezing level was well above the summits.

Observed Snow Stability and Avalanche Hazard

The spring snowpack continues to thaw and consolidate. Although some minor surface instabilities exist on some steep slopes, stability is generally good. Remaining cornices are slumping and prone to collapse in the mild conditions. The avalanche hazard is Low.

Mountain Conditions

Observed Mountain Travel Conditions	Diminishing snowpack, good above 900 metres. Clear but hazy. Winds approx 10mph or less.
Comments	Icefall and cornice collapse remain a hazard.
