

THE AVALANCHE HAZARD WILL BE LOW

Avalanche Hazard Forecast for Friday 25/03/2022

Avalanche Problems

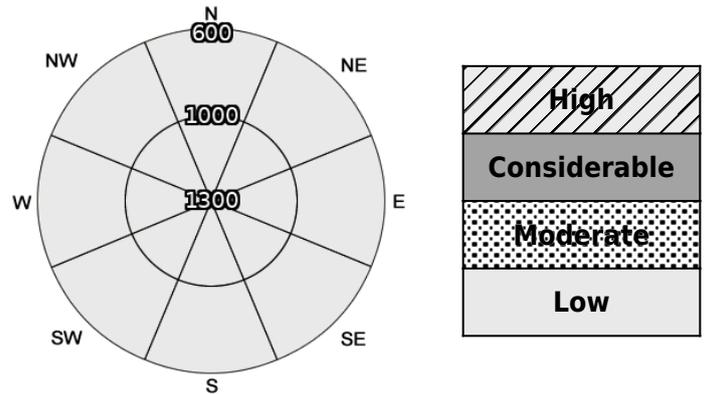

Cornices

Gliding Snow

Forecast Snow Stability & Avalanche Hazard

The snowpack will continue to thaw and consolidate at all altitudes and remain well bonded and stable throughout. Glide cracks will continue to widen with the potential for full depth avalanche, especially where the snow overlies steep rock slab terrain. Cornices will be unstable and prone to collapse. The avalanche hazard will be Low.

Forecast Weather Influences

Mild conditions will continue with freezing levels remaining above the summits throughout the forecast period. No precipitation is expected, clear overnight with sunshine during the day. Light to moderate winds will be Westerly in direction.

Comments

During this mild spell there have been reports of cornice collapse in Coire and Lochain and a full depth avalanche to one side of Hells Lum. Rock fall is also a potential hazard.
