

THE AVALANCHE HAZARD WILL BE LOW

Avalanche Hazard Forecast for Sunday 27/03/2022

Avalanche Problems

Cornices

Gliding Snow

Forecast Snow Stability & Avalanche Hazard

Little change. The snowpack will be well bonded and stable throughout, soften through the day but remain firm on shaded Northerly facing slopes. Glide cracks will continue to widen, these will be mostly above 900 metres on sun exposed slopes. Cornices on a multitude of aspects will be unstable. The avalanche hazard will be Low.

High
Considerable
Moderate
Low

Forecast Weather Influences

Clear and sunny throughout the forecast period.

Inversion conditions will continue with ground temperatures around freezing at dawn; however the air temperature will remain above freezing at all levels. Light to moderate winds will be Westerly in direction.

Comments

North facing slopes remain firm with serious run out potential.
