

THE AVALANCHE HAZARD WILL BE LOW**Avalanche Hazard Forecast for Tuesday 29/03/2022****Avalanche Problems****Wind Slab****Cornices****Forecast Snow Stability & Avalanche Hazard**

The old snowpack will refreeze becoming very firm and stable. New snow amounts are not expected to be great with any unstable deeper accumulations mostly avoidable and on South-East to South-Westerly aspects above 900 metres. A general dusting of new snow will cover terrain at lower elevations. The avalanche hazard will be Low.

**Forecast Weather Influences**

Winds will be light to moderate strength North to Easterly. Precipitation falling as light snow showers around summit levels during Tuesday morning, then above 400 metres by the end of the day.

Comments

All change with cold conditions and snow to glen levels from Tuesday. Seriously firm and icy snowpack on shaded Northerly slopes with significant runout impact into rocks for any slips and falls.
