Avalanche Hazard Forecast

FOR PERIOD 18:00HRS Mon 28/03/2022 TO 18:00HRS Tue 29/03/2022

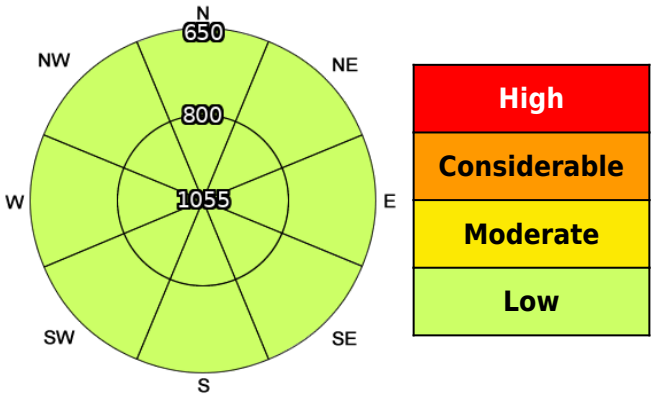

THE AVALANCHE HAZARD WILL BE LOW

Avalanche Hazard Forecast for Tuesday 29/03/2022

Avalanche Problems

Forecast Snow Stability & Avalanche Hazard

The patchy thawing snowpack will slowly firm up as the freezing level lowers and will remain stable and well bonded. This existing snowpack will be found mainly on North through East to South-East aspects above 800 metres. Any new snowfall will be superficial and will be mainly lying on bare ground. The avalanche hazard will be Low.

Forecast Weather Influences

The freezing level will lower below summit height around dawn to reach 700 metres. Light winds will become moderate during the day from a general North-East direction. Insignificant amounts of snowfall are forecasted in the afternoon, slightly more inland.

Comments

Forecast shows a northerly airmass continuing to move slowly south bringing snow to all levels on increasing wind speeds.
