Avalanche Hazard Forecast

FOR PERIOD 18:00HRS Tue 29/03/2022 TO 18:00HRS Wed 30/03/2022

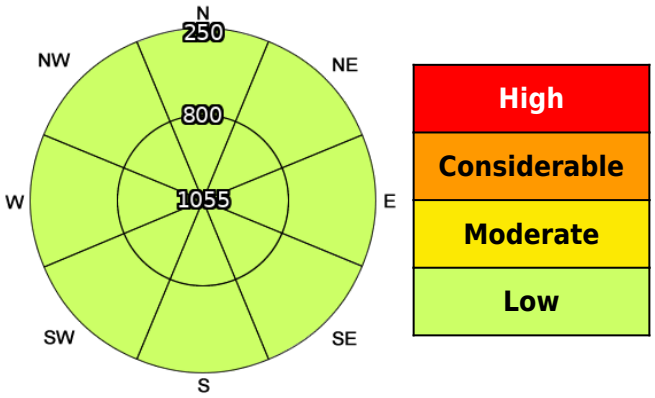
THE AVALANCHE HAZARD WILL BE LOW

Avalanche Hazard Forecast for Wednesday 30/03/2022

Avalanche Problems

Forecast Snow Stability & Avalanche Hazard

The old stable snowpack will refreeze and become firm. Greatest amounts will be found on North through East to South-East aspects above 800 metres. New snow amounts are not expected to be significant and will mainly lie on bare ground. Any deeper accumulations will be found on South to West aspects above 800 metres and will be easily avoidable. The avalanche hazard will be Low.



Forecast Weather Influences

Moderate winds from a general North-East direction will increase slightly during the day. It will remain dry overnight with snow showers from late morning onwards. The 600 metres freezing level will lower to 300 metres overnight before rising to 500 metres during the afternoon.

Comments

An unstable colder weather influence for the next few days.
