

THE AVALANCHE HAZARD WILL BE LOW**Avalanche Hazard Forecast for Monday 04/04/2022****Avalanche Problems****Wet Snow****Cornices****Forecast Snow Stability & Avalanche Hazard**

The snowpack will start to thaw at all levels and diminish at lower elevations. Snowpack stability should remain generally good in all locations. Some minor localised surface wet snow instabilities may be present on steeper North to Easterly aspects above 900 metres. Any remaining cornices will be prone to collapse. The avalanche hazard will be Low.

**Forecast Weather Influences**

Overnight, the freezing level will be well above the summits with rain at all levels and strong Westerly winds. During the day the freezing level will lower slightly to around 1000 metres, precipitation will ease with some drizzle and sleet over the higher summits. Winds will be strong from the West-North-Westerly direction.

Comments

Overnight, much milder with some heavy rain.
