Avalanche Hazard Forecast

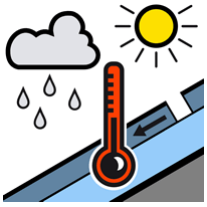
Issued 03/04/2022

FOR PERIOD 18:00HRS Sun 03/04/2022 TO 18:00HRS Mon 04/04/2022

THE AVALANCHE HAZARD WILL BE LOW

Avalanche Hazard Forecast for Monday 04/04/2022

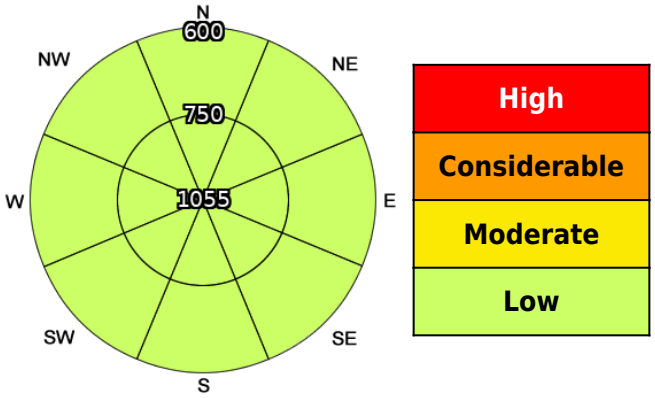
Avalanche Problems



Wet Snow

Forecast Snow Stability & Avalanche Hazard

Any remnants of the recent shallow snow cover will continue to thaw at all levels, likely thawing altogether overnight. The patchy old snow will become saturated, softening throughout, but will remain generally stable and will begin to refreeze at summit level late in the afternoon. New snow amounts in the afternoon will not be significant. The avalanche hazard will be Low.



Forecast Weather Influences

Heavy overnight rain at all levels will ease by the morning with some sleet and snow likely on the highest summits later as the freezing level lowers to around 1000 metres by the end of the afternoon. Gale force Westerly winds will start to ease by dawn, becoming a moderate North-Westerly by the end of the forecast period.

Comments

A very wet period is forecast, particularly overnight. The snowpack will diminish overall. Colder on Tuesday.
