

THE AVALANCHE HAZARD WILL BE LOW

Avalanche Hazard Forecast for Tuesday 05/04/2022

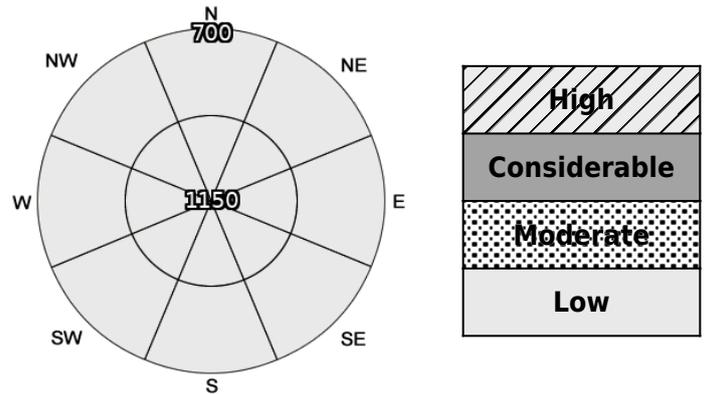

Avalanche Problems

Cornices

Forecast Snow Stability & Avalanche Hazard

The existing snowpack will continue to thaw, but remain generally well bonded and stable in all locations. Any new snow amounts that may affect the highest summits are not expected to be significant. Most snow will remain in North and East facing corries above 900 metres, diminishing and patchy elsewhere. Any remaining cornices will be prone to collapse. The avalanche hazard will be Low.

Forecast Weather Influences

Showers throughout the day will be rain at most levels with sleet or snow showers possible on the highest summits. The freezing level will be around 1200 metres rising towards the end of the day. Winds will be moderate West-North-Westerly overnight backing South-South-West during the day and strengthening during the afternoon.

Comments

Showers becoming wintry Tuesday night and continuing through Wednesday.
