

THE AVALANCHE HAZARD WILL BE MODERATE

Avalanche Hazard Forecast for Tuesday 05/04/2022

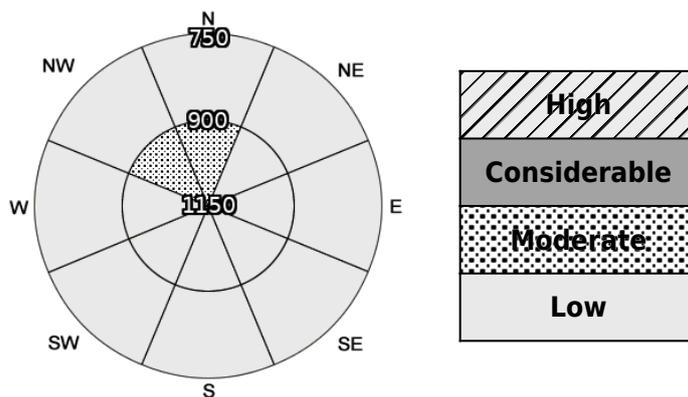

Avalanche Problems

Wind Slab

Forecast Snow Stability & Avalanche Hazard

Initially a light covering on most aspects but some redistribution of deposits likely as winds increase in strength. New unstable accumulations will develop mainly on North-West and North aspects above 900 metres. Greatest hazard will be found in wind sheltered locations where new deposits develop over older snow ice, mostly corrie rims and gully tops. Older snow will start to refreeze, to become firm and well bonded. The avalanche hazard will be Moderate.

Forecast Weather Influences

Likely snow showers throughout the day, initially at all levels but possibly becoming wetter at lower levels late afternoon. Winds, light Easterlies at dawn but strengthening during the day from the South-East.

Comments

Some uncertainty to Tuesday's weather forecast. Possibly becoming wetter towards the end of the day. Worth checking latest forecast when planning your day.
