

THE AVALANCHE HAZARD WILL BE MODERATE**Avalanche Hazard Forecast for Wednesday 06/04/2022****Avalanche Problems****Wind Slab****Wet Snow****Cornices****Forecast Snow Stability & Avalanche Hazard**

Overnight there will be a period of wet snow instabilities on steep and convex North-East to South-East aspects mainly above 1000 metres. Cornices will become unstable. As it turns cooler new windslab accumulations will develop on Northerly to Easterly aspects above 1000 metres. Areas particularly affected will be below coire rims and gully exits. The avalanche hazard will be Moderate.

**Forecast Weather Influences**

Precipitation throughout the forecast period. This will initially fall as sleet and drizzle at around summit levels before turning to snow above 800 metres from the middle of the night onwards. Strong to gale force West-South-Westerly winds will ease a little during the day and back to become South-Westerly in direction. The freezing level will fall to 900 metres.

Comments

During this morning (Tuesday) much milder temperatures were encountered than originally forecast.
