

THE AVALANCHE HAZARD WILL BE CONSIDERABLE

Avalanche Hazard Forecast for Thursday 07/04/2022

Avalanche Problems

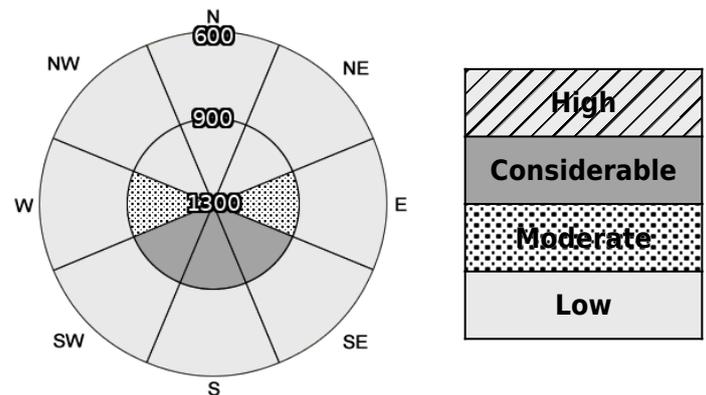

Wind Slab

Cornices

Forecast Snow Stability & Avalanche Hazard

Accumulations of fresh unstable windslab will develop in steep wind sheltered locations mainly on South-East to South-West aspects above 900 metres. More localised accumulations will be present on West and East aspects due to cross loading. Fragile cornices will develop above all these aspects. Isolated windslab accumulations will also be present in steep banks at lower elevations. Slopes exposed to the Northerly winds will be scoured and stable. The avalanche hazard will be Considerable.

Forecast Weather Influences

Precipitation throughout the period will initially be snow above 750 metres becoming snow at most levels by morning. Snowfall will be heaviest during the night. Very strong Northerly winds overnight, will ease to moderate and back to become North-Westerly during the day. The freezing level will gradually fall to around 400 metres by morning rising slightly during the day.

Comments

A return to winter tomorrow, remaining cold for a few days
