Avalanche Hazard Forecast

FOR PERIOD 18:00HRS Wed 06/04/2022 TO 18:00HRS Thu 07/04/2022

THE AVALANCHE HAZARD WILL BE MODERATE

Avalanche Hazard Forecast for Thursday 07/04/2022

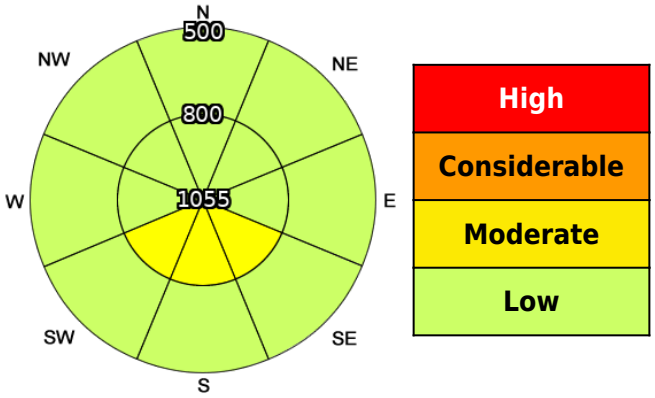
Avalanche Problems

Wind Slab

Cornices

Forecast Snow Stability & Avalanche Hazard

Fresh unstable windslab will be deposited in wind-sheltered areas. Greatest accumulations will be on South-East to South-West aspects above 800 metres, with West aspects also affected. Accumulations gaining depth are not expected to be extensive. Fragile cornices will build above these aspects. The old snowpack will refreeze and be stable. The avalanche hazard will be Moderate.



Forecast Weather Influences

Winds are expected to be very strong mainly North-North-Easterly overnight, strong mainly Northerly during the day. Precipitation is expected throughout the period, falling as snow above around 600 metres during the evening, above 200 metres around dawn and above 400 metres during the day. The freezing level will rise to around 500 metres during the day.

Comments

A return to winter for at least a few days.
