

THE AVALANCHE HAZARD WILL BE MODERATE

Avalanche Hazard Forecast for Saturday 09/04/2022

Avalanche Problems

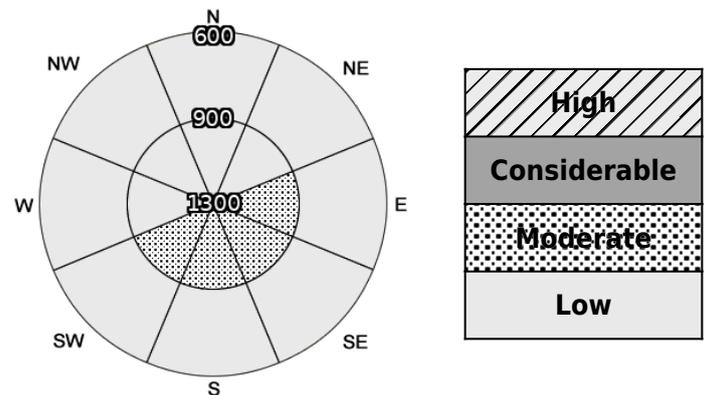

Wind Slab

Cornices

Forecast Snow Stability & Avalanche Hazard

Accumulations of moderately bonded windslab will continue to develop, mainly on East through South to South-West aspects above 900 metres. Greatest hazard will be found in wind sheltered locations, gully tops and steep convex features. Fragile cornices will continue to develop above these aspects. More localised accumulations of windslab will be present on West and North-East aspects due to cross loading. The avalanche hazard will be Moderate

Forecast Weather Influences

Winds will be strong from the North-West, easing slightly during the afternoon. Light snow showers are expected overnight and through Saturday. The freezing level will be around 400 metres before rising slightly during the daytime.

Comments

Strong winds expected to continue with further light snowfall. Poor visibility and challenging winter conditions. Wind exposed slopes are scoured and firm with serious abrupt runouts.
