Southern Cairngorms

Issued 09/04/2022

Avalanche Hazard Forecast

FOR PERIOD 18:00HRS Sat 09/04/2022 TO 18:00HRS Sun 10/04/2022

THE AVALANCHE HAZARD WILL BE MODERATE

Avalanche Hazard Forecast for Sunday 10/04/2022

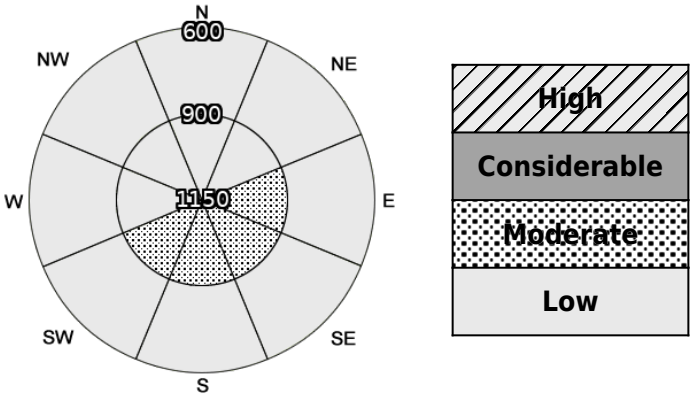

Avalanche Problems

Wind Slab

Forecast Snow Stability & Avalanche Hazard

Localised accumulations of moderately bonded windslab will be encountered in wind sheltered locations on East through South to South-West aspects above 900 metres. Steeper locations such as gully tops, scarp slopes and around sharply defined corrie rims will be most affected. Soft accumulations at lower elevations will start to consolidate as the freezing level gradually rises. The avalanche hazard will be Moderate.

Forecast Weather Influences

Very light snow showers dying out during the evening to give a cloudy but dry day. Fresh Westerly winds overnight easing to become light, variable West-North-Westerly. 600 metre freezing level overnight, gradually rising to 975 metres by the end of the forecast period.

Comments

Trail breaking required - take a mate with you....or two....!
