

THE AVALANCHE HAZARD WILL BE LOW

Avalanche Hazard Forecast for Monday 11/04/2022

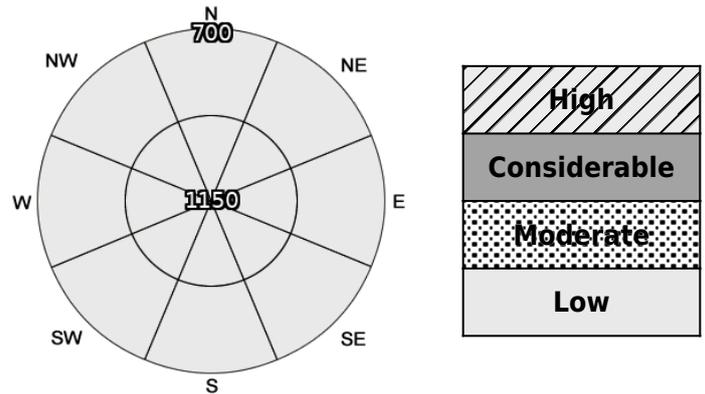

Avalanche Problems

Cornices

Forecast Snow Stability & Avalanche Hazard

With mild and mainly dry conditions expected general snowpack stability will be good in most areas. Localised surface instabilities will exist in summit gully exits and around corrie rims but these areas are not expected to be deep or extensive and should in the main be avoidable. Cornices will be prone to collapse. The avalanche hazard will be Low.

Forecast Weather Influences

It will remain mainly dry with some showers possible by evening. Winds will be East-South-East fresh initially strengthening to gale/severe gale by the end of the day. The freezing level will rise above the summits overnight remaining there through the day.

Comments

Milder and dry conditions will introduce a slow thaw at all levels. The snowpack will soften and become moist in many areas, some steeper slopes will remain firm and will require caution, there will be an increased risk of cornice collapse, falling rocks and ice.
