

## THE AVALANCHE HAZARD WILL BE MODERATE

### Avalanche Hazard Forecast for Tuesday 12/04/2022

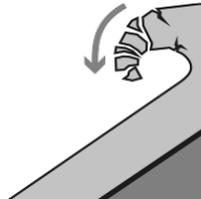

#### Avalanche Problems

Wind Slab

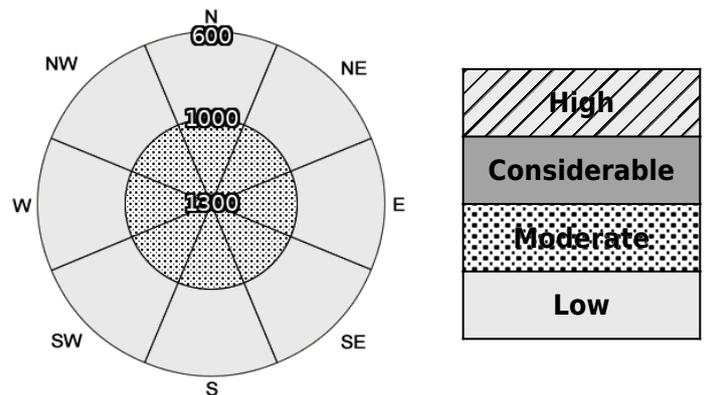

Wet Snow

Cornices

#### Forecast Snow Stability & Avalanche Hazard

The snowpack will continue to consolidate on all aspects and altitudes. Instabilities will persist within deeper accumulations on steep and convex North-East through East to Southerly aspects above 1000 metres. New windslab will develop on West to North aspects above 1000 metres, these accumulations will be isolated and shallow. There will be the potential for wet snow surface instabilities and cornice collapse on many aspects during the afternoon. The avalanche hazard will be Moderate.

#### Forecast Weather Influences

Gale force South-Easterly winds during the first part of the night, gradually easing through the day to moderate then light. A few light snow showers at around summit levels, these will peter out during the morning and turn to light rain at all levels during the afternoon. The 1000 metre freezing level will rise above the summits during the day.

#### Comments

Falling ice and rockfall will be a potential hazard during the mild conditions.
